

PIYUSH PATRIKAR

AI Engineer · Machine Learning · Python · NLP & Computer Vision

+91 8349893562 | piyushpatrikar459@gmail.com | [linkedin.com/in/piyush-patrikar](https://www.linkedin.com/in/piyush-patrikar) | piyushcodes.in | github.com/PiyushCodess

PROFESSIONAL SUMMARY

Motivated AI Engineer with hands-on experience building and deploying ML models across NLP, computer vision, and LLM-based systems, with strong Python skills and core libraries. Experienced in end-to-end development from data preprocessing to deployment through real projects and internships, focused on solving real-world problems.

KEY SKILLS

Machine Learning: Supervised Learning, Unsupervised Learning, Classification, Regression, Clustering

Deep Learning & AI: LLMs (OpenAI, Groq/Llama, Gemini), NLP, Computer Vision, Embeddings, RAG Architecture, FAISS Vector Search, LangChain, LangGraph

Languages & Libraries: Python, C++, SQL, Pandas, NumPy, Scikit-learn, Streamlit, Flask, FastAPI

MLOps & Tools: A/B Testing, Model Deployment, Docker, REST APIs, n8n, Zapier, Git, SQLite

Certifications: Oracle Generative AI Professional, HackerRank SQL (Advanced), NPTEL Python for Data Science

PROFESSIONAL EXPERIENCE

VKAPS IT Solutions Pvt. Ltd | AI Automation Intern Indore, MP | Aug 2025 – Present

- Built and deployed AI-powered automation workflows using Python, n8n, and LLM integrations, streamlining business processes and reducing manual effort.
- Developed Generative AI solutions by integrating APIs like OpenAI, Gemini, and Groq, using prompt engineering and testing to ensure reliable outputs.
- Created clean Python scripts and API integrations (e.g., Zapier) and monitored live models, continuously improving performance and usability for non-technical teams.

Microsoft & AICTE | AI Foundations Virtual Intern Remote | Apr 2025

- Completed guided ML exercises covering supervised vs. unsupervised learning, model evaluation metrics, cross-validation, and hyperparameter tuning using cloud-based AI tools.
- Applied machine learning concepts to a structured capstone project, gaining practical experience in data preprocessing, feature selection, and model assessment workflows.

PROJECTS

MediDoc – RAG-Based Clinical Document Q&A System (NLP · LangChain · FAISS · OpenAI · FastAPI · Streamlit)

- Built a Retrieval-Augmented Generation (RAG) system enabling accurate Q&A over medical PDFs using embeddings, FAISS vector search, and LLMs — directly applying NLP and deep learning techniques from the ML stack.
- Developed a FastAPI backend and Streamlit chat interface integrated with LangChain and OpenAI, delivering context-aware clinical insights in real time with measurable relevance improvements over keyword search.

FactCheck – Fake News Detection System (NLP · Scikit-learn · Ensemble ML · Streamlit · Docker)

- Developed an end-to-end NLP classification pipeline extracting 15+ linguistic and sentiment features from the ISOT dataset (44K articles), training and evaluating 5 ML models with a soft-voting ensemble for final predictions.
- Deployed the system via Docker with an interactive Streamlit interface, demonstrating full ML lifecycle ownership from data preprocessing and model evaluation to containerized production deployment.

LawSimplify – Legal Document Risk Analyser (Groq/Llama 3.3 · Flask · PyPDF2 · Python)

- Built a Flask-based intelligent system integrating the Groq API (Llama 3.3) for legal text simplification and risk detection, with PyPDF2 and python-docx for multi-document parsing and PDF export of AI-driven insights.

EDUCATION

Indore Institute of Science and Technology

B.Tech, Computer Science & Engineering | CGPA: 6.6

Relevant coursework: Data Structures & Algorithms, Database Management (SQL), Machine Learning, Software Design Principles

Indore, MP

Expected 2026
